

Expert Rating Rubric

专家评分量表

Study	POLIS: An AI-Enabled Decision-Support System for Equitable Green Infrastructure Planning
Application	11000110520260706104327
Document	Expert Rating Rubric / 专家评分量表
Application approval date	6 July 2026

1. Rating task

1. 评分任务

For each assigned scenario, review the common site reference, stated analytical needs, constraints, rendered plan, and short specification. Workflow identities are concealed and presentation format is standardised. Rate each intervention output independently before completing any selected pairwise preference. Do not infer quality from visual polish alone.

对于每个分配的情景，请查看共同场地参照、既定分析需求、约束条件、渲染平面图和简短说明。 workflow身份被隐藏，展示格式已标准化。请先独立评价每个干预输出，再完成指定的成对偏好选择。不要仅根据视觉精美程度判断质量。

2. Common seven-point scale

2. 通用七点评分尺度

Score	English anchor	中文锚点
1	Very poor	很差
2	Poor	较差
3	Somewhat poor	略差
4	Adequate	合格
5	Good	良好
6	Very good	很好
7	Excellent	优秀

3. Five required dimensions

3. 五个必评维度

A. Responsiveness to stated needs

A. 对既定需求的回应程度

Assess whether the proposal addresses the supplied need records, respects stated priorities, and responds transparently to conflicts without silently dropping important requirements.

评价方案是否回应给定需求记录、尊重既定优先级，并以透明方式处理冲突，而不是无说明地遗漏重要要求。

Score: 1 2 3 4 5 6 7

B. Spatial/design quality

B. 空间与设计质量

Assess spatial coherence, circulation, placement, relationships between uses, legibility, and whether the plan works as a unified site design.

评价空间连贯性、流线、布局、不同使用功能之间的关系、可读性，以及方案是否形成统一的场地设计。

Score: 1 2 3 4 5 6 7

C. Constructability/feasibility

C. 可建造性与可实施性

Assess whether geometry, access, materials, maintenance, budget logic, and stated regulatory responses appear realistic and capable of implementation.

评价几何、通行、材料、维护、预算逻辑和所述法规响应是否现实，并具有实施可能性。

Score: 1 2 3 4 5 6 7

D. Equity/inclusiveness

D. 公平性与包容性

Assess whether access and benefits are distributed fairly across the encoded beneficiary groups, with appropriate attention to vulnerable users and avoidable barriers.

评价通行机会和收益是否在编码的受益群体之间得到公平分配，是否适当关注弱势使用者并避免可消除的障碍。

Score: 1 2 3 4 5 6 7

E. Overall integration - PRIMARY RATING

E. 整体整合 - 主要评分

Assess how successfully the proposal combines stated needs, spatial quality, feasibility, equity, environmental function, and constraints into one coherent and credible planning response.

评价方案能否将既定需求、空间质量、可实施性、公平性、环境功能和约束条件整合为一个连贯且可信的规划响应。

Score: 1 2 3 4 5 6 7

4. 强制二选一偏好

对于每一组指定方案，请选择对给定情景作出更好整体回应的方案。本题不提供平局选项。请依据五个维度的规划内容作出选择，不要依据推测的工作流身份或渲染风格。

Pair ID / 设计对编号	
Required choice / 必选	☐ Proposal A / 方案 A ☐ Proposal B / 方案 B

5. 可选评论

您可以选择说明方案最突出的优点、最重要的缺点或实施顾虑。请勿填写姓名、雇主、客户、项目保密信息或能够识别他人的信息。

6. 完成检查

- ☐ I rated each assigned output independently on all five dimensions.
 - ☐ 我已独立完成每个分配输出的五个维度评分。
 - ☐ I completed every assigned forced-choice preference without using a tie.
 - ☐ 我已完成所有指定的强制二选一，未使用平局。
 - ☐ My optional comment contains no direct identifier or confidential project information.
 - ☐ 我的可选评论不包含直接身份信息或项目保密信息。
